

OCD-H Series Heated Desiccant Air Dryers

OCD-H Series

In the OCD-H series heated desiccant dryers, the regeneration of the dehumidifier can be achieved without loss of compressed air by means of centrifugal blower motor and high efficiency heater. The completely automatic drying system uses blower to pull ambient air and pass it through the heater.

- This is a double-tank system.
- The first tank, which has high hygroscopic impact resistance and a large surface area, separates the moisture from the compressed air.
- The second tank simultaneously performs the drying process with regeneration. The tank with the saturated desiccant is dried with the help of super dry air at atmospheric pressure.
- The hot air stream flows opposite to drying flow direction.
- The advanced control system monitors the dew point and adjusts the heating/regeneration accordingly thereby providing valuable energy savings.
